

Step-1

Given that $(1,0)$ and $(0,1)$ transformed to $(1,4)$ and $(1,5)$ by a matrix.

We have to find the matrix that transforms $(1,0)$ and $(0,1)$ to $(1,4)$ and $(1,5)$.

Step-2

We have

$$T(1,0) = (1,4)$$

$$T(0,1) = (1,5)$$

Therefore, the matrix M of linear transformation T under the basis $(1,0)$ and $(0,1)$

is $M = \begin{bmatrix} 1 & 1 \\ 4 & 5 \end{bmatrix}$.

Step-3

Given that $a(1,4) + b(1,5) = (1,0)$

We have to find a and b

Now,

$$a(1,4) + b(1,5) = (1,0)$$

$$\Rightarrow (a+b, 4a+5b) = (1,0)$$

$$\Rightarrow a+b=1, 4a+5b=0$$

Solving these equations, we get

$$b = -4, a = 5$$

Hence $(a,b) = (5,-4)$

Step-4

We have to find how the new coordinates $(5,-4)$ of $(1,0)$ is related to M or M^{-1} .

The new coordinates of $(1,0)$ are related to M^{-1} because $(1,0) = 5(1,4) + (-4)(1,5)$.
