

Step-1

(a) Suppose the vectors w be the columns of A and consider $w_1 = (1, 1, 0)$, $w_2 = (2, 2, 1)$, $w_3 = (0, 0, 2)$, and $b = (3, 4, 5)$.

So we have,

$$Ax = b$$
$$\begin{bmatrix} 1 & 2 & 0 \\ 1 & 2 & 0 \\ 0 & 1 & 2 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 3 \\ 4 \\ 5 \end{bmatrix}$$

To solve for $Ax = b$, use Gaussian elimination.

$$\left[\begin{array}{ccc|c} 1 & 2 & 0 & 3 \\ 1 & 2 & 0 & 4 \\ 0 & 1 & 2 & 5 \end{array} \right]$$

By using $R_2 \rightarrow R_2 - R_1$, we get:

$$\left[\begin{array}{ccc|c} 1 & 2 & 0 & 3 \\ 0 & 0 & 0 & 1 \\ 0 & 1 & 2 & 5 \end{array} \right]$$

Second row represents the equation,

Step-2

$$0x_1 + 0x_2 + 0x_3 = 1$$

Step-3

By solving the equation $0x_1 + 0x_2 + 0x_3 = 1$, we get

$$0 = 1$$

As we know $0 \neq 1$, therefore, $Ax = b$ has **no solution** and b **is not in it**.

Step-4

(b) Suppose the vectors w be the columns of A and consider $w_1 = (1, 2, 0)$, $w_2 = (2, 5, 1)0$,

Step-5

$$\mathbf{w}_3 = (0, 0, 2), \text{ and } \mathbf{w}_4 = (0, 0, 0).$$

We know that the system of equation $\mathbf{Ax} = \mathbf{b}$ has a solution if and only if the vector \mathbf{b} can be expressed as a combination of the columns of \mathbf{A} . Then \mathbf{b} is in the column space.

Let

$$\mathbf{A} = \begin{bmatrix} 1 & 2 & 0 & 0 \\ 2 & 5 & 0 & 0 \\ 0 & 0 & 2 & 0 \end{bmatrix}$$

And

$$\mathbf{b} = \begin{bmatrix} b_1 \\ b_2 \\ b_3 \end{bmatrix}$$

Step-6

To solve $\mathbf{Ax} = \mathbf{b}$, use Gaussian elimination.

$$\left[\begin{array}{cccc|c} 1 & 2 & 0 & 0 & b_1 \\ 2 & 5 & 0 & 0 & b_2 \\ 0 & 0 & 2 & 0 & b_3 \end{array} \right] \rightarrow \left[\begin{array}{cccc|c} 1 & 0 & 0 & 0 & 5b_1 - 2b_2 \\ 0 & 1 & 0 & 0 & b_2 - 2b_1 \\ 0 & 0 & 1 & 0 & b_3/2 \end{array} \right]$$

Therefore, yes there is a \mathbf{b} in it.
