

Step-1

Solve the following problem:

Maximize: $5x + 6y + 9z$

Subject to:

$$x + y + z \leq 100,000$$

$$z \leq 20,000$$

$$x \geq z$$

$$x, y, z \geq 0$$

Step-2

To solve the above problem consider the inequalities to be strict equalities as given below:

$$x + y + z = 100,000$$

$$z = 20,000$$

$$x = z$$

Now, do the following calculations:

$$x + y + z = 100,000$$

$$x + y + x = 100,000$$

$$2x + y = 100,000$$

So,

$$y = 100,000 - 2(20,000)$$

$$y = 60,000$$

Step-3

Therefore, the variable has following values:

$x = 20,000$
$y = 60,000$
$z = 20,000$
