

Step-1

We have to project the vector $b = (1, 2)$ onto vectors that are not orthogonal, $a_1 = (1, 0)$ and $a_2 = (1, 1)$. And we have to show that, unlike the orthogonal case, the sum of the two one dimensional projections does not equal b .

Step-2

Let P_1 = the projection of b onto the line through $a_1 = \frac{a_1^T b}{a_1^T a_1} a_1$

Now

$$\begin{aligned} a_1^T b &= (1 \ 0) \begin{pmatrix} 1 \\ 2 \end{pmatrix} \\ &= 1 + 0 \\ &= 1 \end{aligned}$$

Step-3

$$\begin{aligned} a_1^T a_1 &= (1 \ 0) \begin{pmatrix} 1 \\ 0 \end{pmatrix} \\ &= 1 + 0 \\ &= 1 \end{aligned}$$

Step-4

Therefore

$$\begin{aligned} P_1 &= \frac{1}{1} \begin{pmatrix} 1 \\ 0 \end{pmatrix} \\ &= \boxed{\begin{pmatrix} 1 \\ 0 \end{pmatrix}} \end{aligned}$$

Step-5

Let P_2 = the projection of b onto the line through $a_2 = \frac{a_2^T b}{a_2^T a_2} a_2$

Now

$$a_2^T b = (1 \quad 1) \begin{pmatrix} 1 \\ 2 \end{pmatrix}$$

$$= 1 + 2$$

$$= 3$$

Step-6

$$a_2^T a_2 = (1 \quad 1) \begin{pmatrix} 1 \\ 1 \end{pmatrix}$$

$$= 1 + 1$$

$$= 2$$

Step-7

Therefore

$$P_2 = \frac{3}{2} \begin{pmatrix} 1 \\ 1 \end{pmatrix}$$

$$= \boxed{\begin{pmatrix} 3/2 \\ 3/2 \end{pmatrix}}$$

Step-8

$$P_1 + P_2 = \begin{pmatrix} 1 \\ 0 \end{pmatrix} + \begin{pmatrix} 3/2 \\ 3/2 \end{pmatrix} = \begin{pmatrix} 5/2 \\ 3/2 \end{pmatrix}$$

Hence

$$\text{So } P_1 + P_2 \neq b$$
