Step-1

Given that
$$U = \begin{bmatrix} 1 & 0 & 1 & 0 & 1 \\ 0 & 1 & 0 & 1 & 0 \end{bmatrix}$$

The column space $(in R^2)$ of U is R^2

$$\big\{(1,0),(0,1)\big\},\big\{(2,3),(1,0)\big\},\big\{(1,0),(1,2)\big\}$$

Are three different basis for R^2 .

Therefore, the three different basis for R^2 is $[\{(1,0),(0,1)\},\{(2,3),(1,0)\},\{(1,0),(1,2)\}]$

Therefore, $C(U) = \text{Any bases for } R^2$.

Step-2

The row space of U is the space spanned by $\{(1,0,1,0,1),(0,1,0,1,0)\}$

$$\big\{ \big(2,0,2,0,2\big), \big(0,1,0,1,0,\big) \big\}, \big\{ \big(1,0,1,0,1\big), \big(0,3,0,3,0\big) \big\}$$

Be two different bases for the row space of U.

Therefore. N(U) = (row1 and row2) or (row1 and row1+row2).
