## Step-1

Suppose that U and V are unitary matrices.

The objective is to show that UV is also unitary matrix by using the criterion  $U^{H}U = I$ .

As U and V are unitary matrices,

$$U^{\mathsf{H}}U = I$$
 and  $V^{\mathsf{H}}V = I$ .

## Step-2

Consider

$$\begin{split} & \left(UV\right)^{\mathrm{H}}\left(UV\right) = \left(V^{\mathrm{H}}U^{\mathrm{H}}\right)\left(UV\right) & \left(UV\right)^{\mathrm{H}} = V^{\mathrm{H}}U^{\mathrm{H}}. \\ & = V^{\mathrm{H}}U^{\mathrm{H}}UV \\ & = V^{\mathrm{H}}IV & U^{\mathrm{H}}U = I. \\ & = V^{\mathrm{H}}V & V^{\mathrm{H}}I = V^{\mathrm{H}}. \\ & = I & V^{\mathrm{H}}V = I. \end{split}$$

Hence, the matrix UV is also unitary.
