## Step-1

If A is 2 by 3 and C is 3 by 2, then we have to show that from its rank,  $CA \neq I$  and we have to give an example in which AC = I. For M < n, a right inverse is not a left inverse.

## Step-2

$$A = \begin{bmatrix} 2 & 1 & 0 \\ 1 & 1 & 0 \end{bmatrix}, C = \begin{bmatrix} 1 & -1 \\ -1 & 2 \\ 0 & 0 \end{bmatrix}$$

Now *A* is 2 by 3 matrix, and *C* is 3 by 2 matrix,

$$CA = \begin{bmatrix} 1 & -1 \\ -1 & 2 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} 2 & 1 & 0 \\ 1 & 1 & 0 \end{bmatrix}$$
$$= \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 0 \end{bmatrix}$$

## Step-3

Therefore the rank of CA = 2

The rank of I = 3 where I is 3 by 3 matrix. Therefore  $CA \neq I$ 

## Step-4

Now

$$AC = \begin{bmatrix} 2 & 1 & 0 \\ 1 & 1 & 0 \end{bmatrix} \begin{bmatrix} 1 & -1 \\ -1 & 2 \\ 0 & 0 \end{bmatrix}$$
$$= \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

Therefore AC = I, where I is 2 by 2 identity matrix C is right inverse of A, but C is not left inverse of A.
