Step-1

Let us consider the **7×7** matrix with 15 1s.

Now, according to weak duality property, if there are k lines to cover all the 1s of the matrix, there are k marriages possible.

Now, the worst arrangement (giving the minimum number of marriages) of all the 1s of the matrix in the data is shown below.

In the matrix, maximum 1s are in one line.

But, still it occupies 3 lines.

Thus, by the theorem, at least 3 marriages are possible.
