A permutation matrix is a square matrix that has exactly one 1 in each row or column and the rest of the entries are zero.

We write a 4 by 4 permutation matrix that becomes the identity matrix with just three row exchanges.

$$A = \begin{bmatrix} 0 & 0 & 0 & 1 \\ 0 & 0 & 1 & 0 \\ 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \end{bmatrix}$$
  
Let us consider

$$R_4 \leftrightarrow R_2 \Rightarrow \begin{bmatrix} 0 & 0 & 0 & 1 \\ 0 & 1 & 0 & 0 \\ 1 & 0 & 0 & 0 \\ 0 & 0 & 1 & 0 \end{bmatrix}$$
 e:

1st exchange:

$$R_{1} \leftrightarrow R_{3} \Rightarrow \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 0 & 1 \\ 0 & 0 & 1 & 0 \end{bmatrix}$$
e:

2<sup>nd</sup> exchange:

$$R_3 \leftrightarrow R_4 \Rightarrow \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}_{=I}$$

$$3^{\text{rd}} \text{ exchange:}$$
